

# The System

Satufen is a platform tailored for the unaccompanied-personal baggage up to 30kgs into Indonesia. It is specifically designed to assist individuals such as migrant workers, religious pilgrims (Haj and Umrah) or foreign workers relocating to Indonesia.

The system streamlines the process of reporting items entering the country, providing detailed calculations of total duties and taxes in compliance with Indonesia's latest regulations. The system implements direct HS Code link, streamlining the customs process and seamlessly integrating with local courier services for direct delivery to the consignee's address.

This system allows us to accurately provide:

- Item descriptions related to the HS Code.
- Applicable duty rates and taxes for the destination country.

## Payment System:

For Satufen users' duties and taxes are **defaulted** to the online system, collected in advance, before shipment is processed, expediting customs processes. Once payments are completed, the system will automatically:

- Notify the transporter at the origin to pick up shipment, Affix barcode-label, and air freight the consolidated parcels to the destination country.
- Notify partner at the destination about the customs and duty charges information that need to be settled and clearance customs.

This process ensures a seamless transaction flow and minimizes potential delays.

**The Company:**  
 Mahyu is a **technology** company focused on revolutionizing *digital logistics-infrastructure* that unifies logistics services, operational functions, payment processing, and administrative systems into a single, interconnected, real-time network environment.

Satufen, developed by Mahyu, is an open and scalable platform. It encourages users to adopt smart devices and digital solutions, moving away from traditional manual methods, streamlining operation and minimizing mistakes.

**Introduction:**

Both individuals and forwarders may lack adequate experience in accurately declaring the Harmonized System (HS) code during customs PIBK (Pemberitahuan Impor Barang Khusus) procedures. Mistakes in HS code declarations can result in significant issues for shippers and businesses, including product misclassification, which can lead to shipment rejections, delays, or penalties imposed by customs authorities in the destination country.
